

# SYNTHETIC TELEPATHY DEFENCES v.1.0

A very, very complex subject reduced to a first attempt at a simple to put together possible part-defence that doesn't cost the earth and can be implemented by anyone worldwide:

## 1) *Oscillating* Desktop Fan = £20

1 x 12" OSCILLATING ELECTRIC DESK FAN 3 SPEED SILENT PORTABLE HOME OFFICE; £17.99

<https://www.ebay.co.uk/itm/113796989448>

## 2) *Silent* Negative Ion Generator = £30

PureMate PM 100 Silent Ionic Air Purifier and Ioniser; £29.99

<https://www.amazon.co.uk/dp/B00L3OZX2C/>

This model creates only 2 decibels of sound.

## 3) *Manual* Timer Plug x 2 = £8

eg Wilco 24 Hour Timer Switch; £4.00

<https://www.wilko.com/en-uk/wilko-24-hour-timer-switch/p/0142473>

### Build Instructions

- 1) Place a timer plug into a wall socket, then add the ionizer (so that the ionizer height in the room is around waist height or higher); set the timer to a random setting of off/on, mainly on.
2. Place a timer plug into a wall socket, then add the fan (ideally at the same height in the room as the ionizer); set the timer to a random setting of off/on, mainly on.

### Why Should I Do The Above??

Within a few minutes of the ionizer and fan having both been on at least once you will start to generate a negative ion field THAT IS FLUCTUATING (some parts more dense than others, some parts moving faster than others) inside the room ; a possible defence to synthetic telepathy type attacks.

### Notes

You need a OSCILLATING fan so that it creates an uneven field of ions. You need a SILENT negative ion generator as this creates less EMF due to the absence of e.g. motor for spinning fan parts). You need MANUAL timers (so that your system stays up even when you are under EM/EW attack (which can take digital systems offline)). Multi-speed fan = extra but useful (and adds almost no cost to the setup). You can make your own negative ion generator, see; <https://www.youtube.com/watch?v=-2KeQDxWH6o>
